RASPBERRY FARMER - no doubt about benefits

I grow commercial raspberries and strawberries crops and first heard about SEER Rockdust at “The Secrets of Rockdust Conference” in Pitlochry in March 2005.

From what I learned there I applied PAS 100 compost to all of my raspberries and then applied the SEER Rockdust via my trickle feed watering system via the mixing barrel where I added the normal fertilisers before directing the supplemented water around the crops.

To test SEER Rockdust I left it out of applied water for 1st 12 rows and applied it to last 12 rows. In 2005 there is no doubt I had an excellent all around crop, but no definite difference was noticeable re. the Rockdust.

This year, as the raspberry canes are putting on new leaves, it is a different story. There is no doubt there is a clear division between rows where SEER Rockdust has been applied and where it has not. In the SEER Rockdust rows the raspberry canes have a fuller coverage of young leaves. The canes are standing straighter and each plant looks far healthier and happier.

Yes, my PAS 100 compost is already here and my order for a bulk load of 25 tons of SEER Rockdust goes in this week. I have no doubt that this is a rock solid investment!

Yours sincerely
Grant Williamson
